BODY

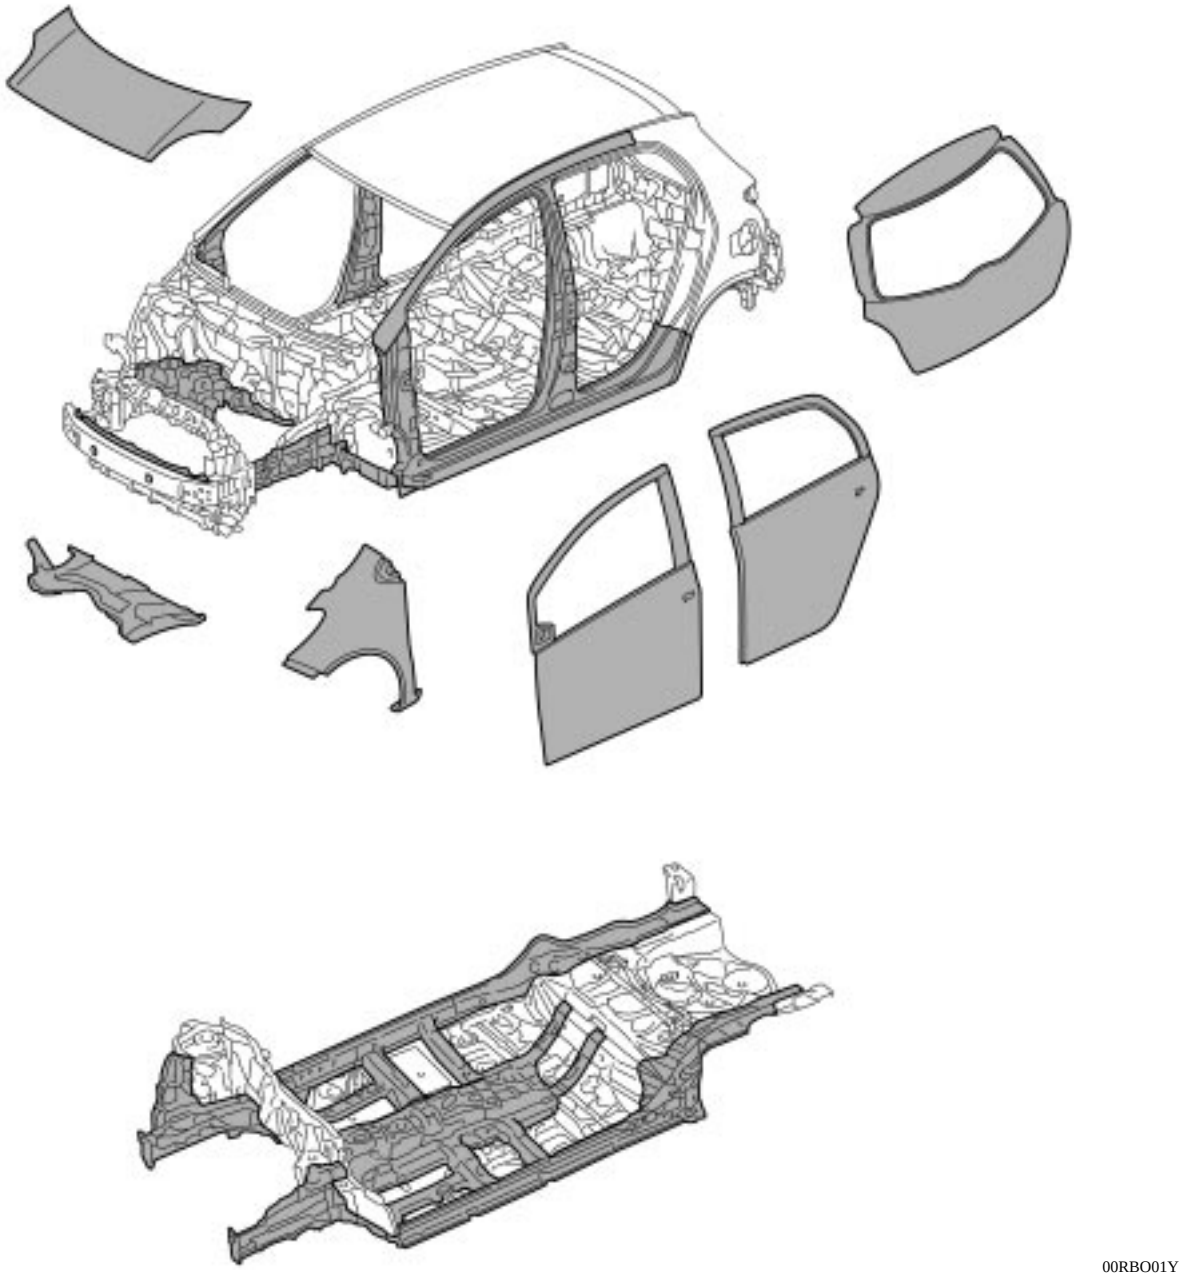

BODY STRUCTURE

■LIGHTWEIGHT AND HIGHLY RIGID BODY

1. High Strength Sheet Steel

High strength sheet steel is used in order to realize excellent body rigidity and a lightweight body.

2. Body Shell Construction

- The front side member and the rear end of the front suspension member are joined with a bolt, ensuring the rigidity of the body.

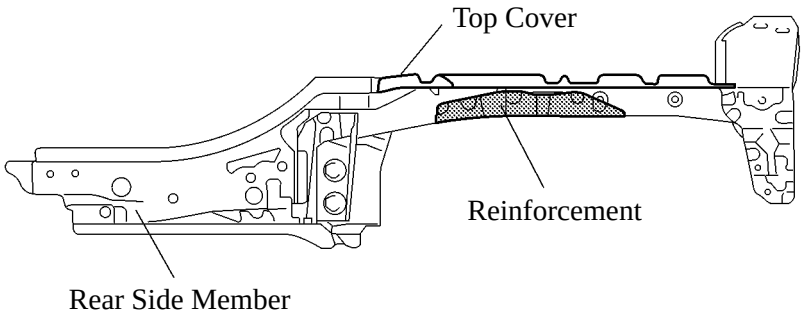

00RBO02Y

- A brace is used in the installation location of the rear suspension, ensuring the rigidity of the body and driving stability.

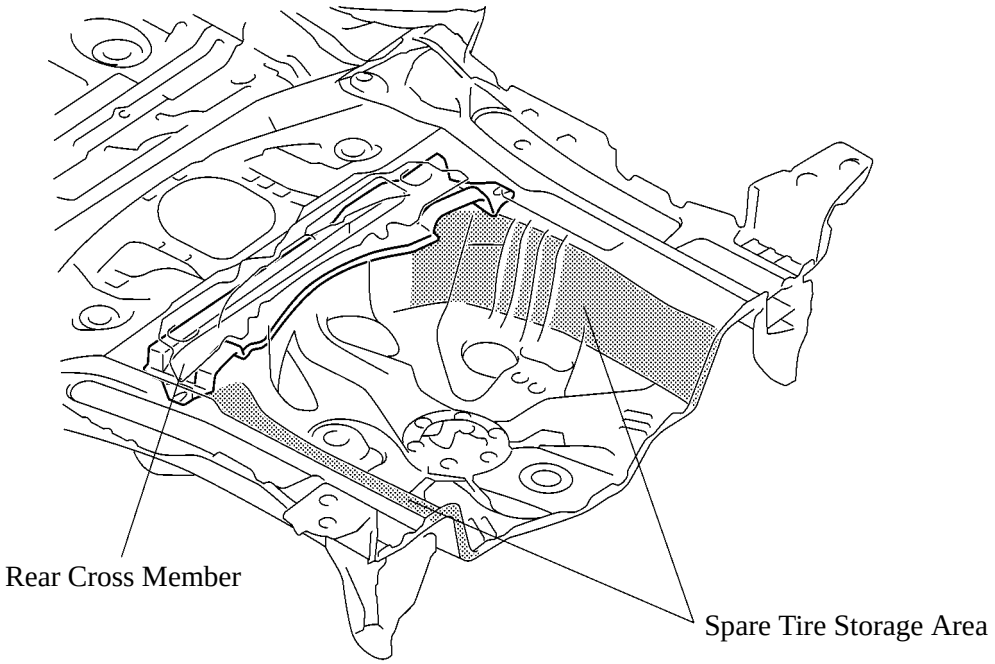

00RBO03Y

- A top cover and reinforcement are provided for the rear side member, ensuring rigidity.

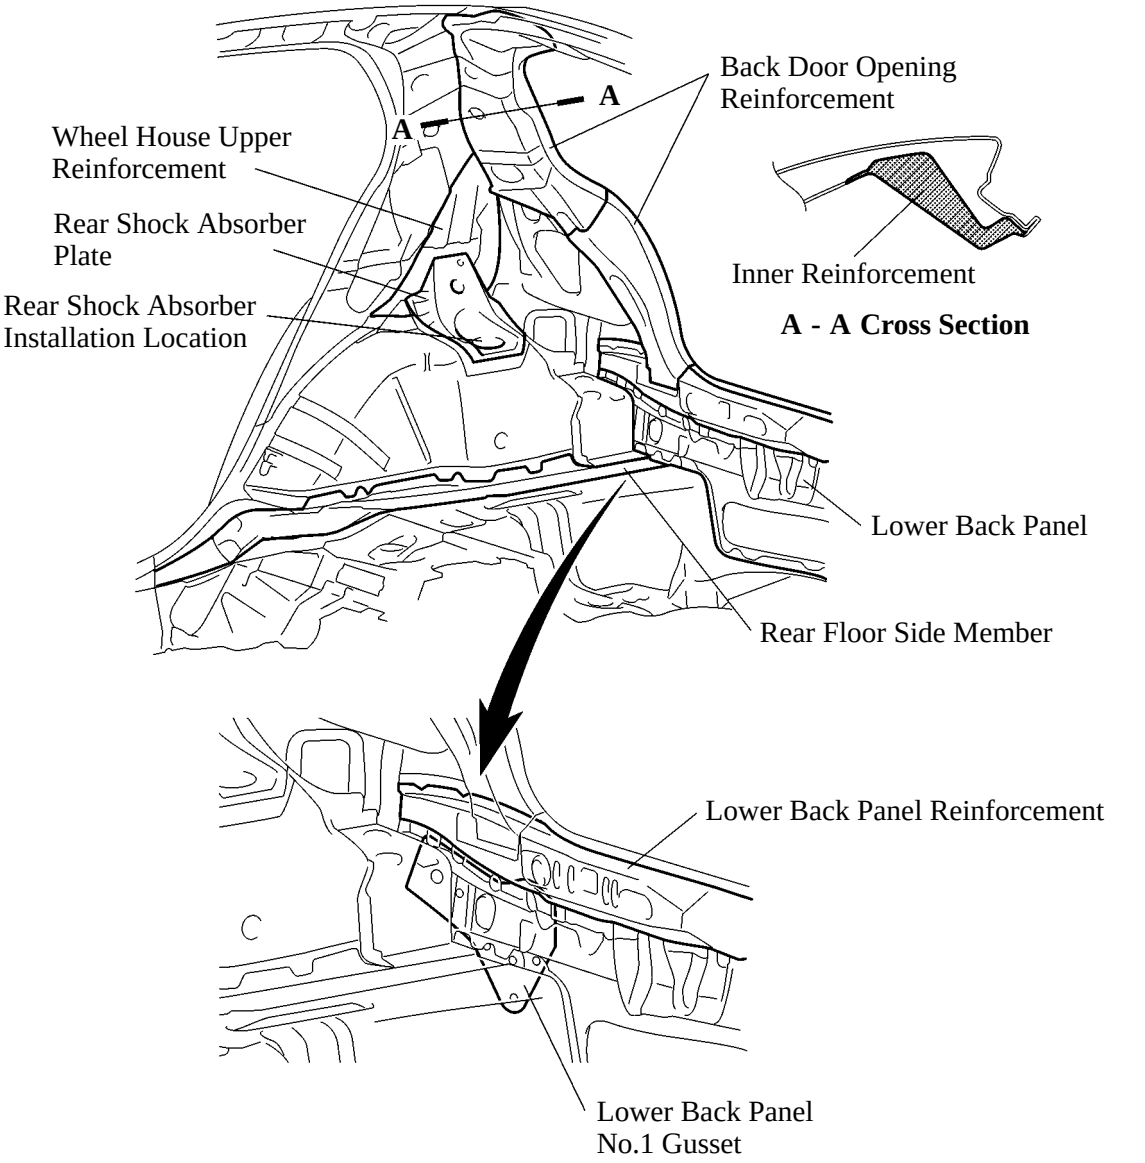

00RBO04Y

- The spare tire storage area and rear cross member are joined, ensuring the rigidity of the body and driving stability.

00RBO05Y

- An efficient reinforcement is used around the back door opening and the installation location of the rear shock absorber, ensuring the torsional rigidity of the body.
