EXTERIOR

Front Design

- Increasing the size of the front bumper and embedding the radiator grille make the front design to fit with the body. This also creates a flow from the hood panel to the bottom of the bumper, which gives a strong impression of the vehicle's presence.
- The combination of the multi-reflector type reflectors and the see-through outer lenses used in the headlights create a crystal appearance. The frosted glass is used for the inner lenses of the turn signal lights, giving the headlights a new look.
- The radiator grille is a honeycomb pattern to give a simple yet sporty impression.
- The round front fog lights in the sides of the front bumper are provided as optional equipment.

Radiator Grille for RS Grade for Canada Model

00RMO01Y

00RMO02Y

Rear Design

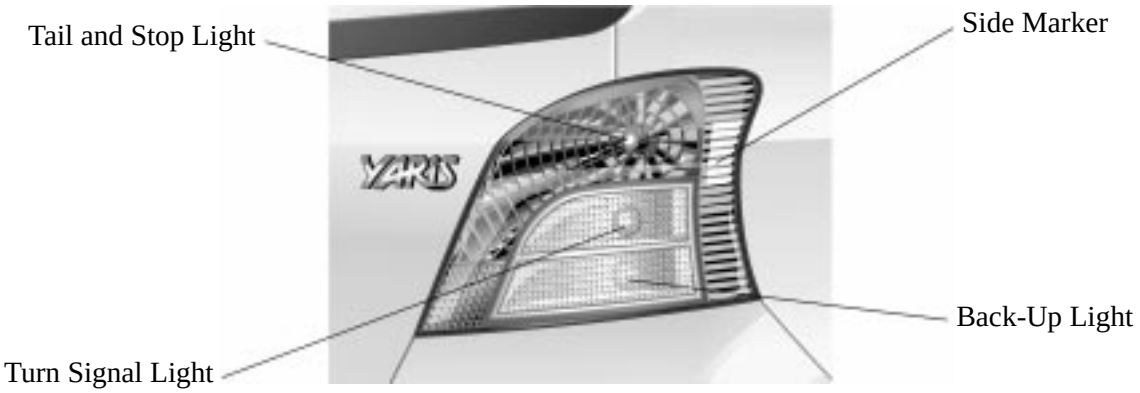

- The shoulder lines running from the body side to the symbol mark provide the rear design an energetic feel and combining a powerful-looking bumper form with a forward tilting line give an impression of stability.
- The combination of the see-through type outer lenses used in the stop light and taillight in the rear combination lights and the multi-reflectors create a crystal appearance.
- The rear spoiler is provided as optional equipment on the U.S.A. models, and provided as standard equipment on the RS grade for the Canada models.
